Targets

Instructions

This worksheet stores the number of variable hours or fixed hours for a Pay Period. This data is used to calculate the targeted variable hours or Targeted fixed hours for a work unit.

Daily variable target hours are used for reports that require a single day target within a pay period. Daily targets can be used if you have different ratios for different days. Example: If a work unit does not work on Saturday or Sunday, you need to set the ratios for Monday - Friday and set the ratio to 0 for Saturday and 0 for Sunday.

This worksheet also establishes the fixed portion of the target hours. Target hours for a Work Unit may be entirely fixed, entirely variable, or a combination of the two. The data in this worksheet is used to

populate the Fixed Hours Target table and reflects the number of hours spent by the work unit (on a pay period basis) on activities that are not directly related to the volume statistic. This value can be set for any or all of the work groups within a work unit, or it can be set for the entire work unit.
